Contributing to the transition to a sustainable future

Triodos Global Equities Impact Fund
Impact Report 2021

This is a marketing communication. Please refer to the prospectus and the KIID of Triodos Global Equities Impact Fund before making any final investment decisions. An overview of the investor’s rights can be found in the prospectus. The value of your investment can fluctuate because of the investment policy. Triodos Global Equities Impact Fund is managed by Triodos Investment Management. Triodos Investment Management holds a license as alternative investment fund manager and UCITS and is under the supervision of the Dutch Authority Financial Markets and De Nederlandsche Bank.
Impact highlights 2021

Top 3 transition themes

- **Prosperous and Healthy People** (32%)
- **Innovation for Sustainability** (21%)
- **Sustainable Mobility and Infrastructure** (16%)

Top 3 Sustainable Development Goals contributed to

- SDG 3: Good Health and Well-being
- SDG 10: Reduced inequalities
- SDG 11: Sustainable cities and communities

3 key engagement topics

- Climate change
- Labour rights
- Executive remuneration

100% of AGMs voted at

14% voted against management

41% of holding companies committed to or aligned with the Science Based Targets initiative

- 21% less GHG emissions than benchmark
- 58% less Water consumption than benchmark
- 98% more Landfill waste than benchmark

2 Triodos Global Equities Impact Fund Impact Report 2021
Going beyond ESG

Foreword by Fund Manager Arjan Palthe

Triodos Global Equities Impact Fund invests in listed companies that materially contribute to the transition towards a sustainable society, through their products and services, or through their business practices. The fund invests exclusively in companies that contribute to one or more of our seven sustainable transition themes, while meeting our strict Minimum Standards.

In 2021, the fund generated positive impact through its exposure to our themes *Prosperous and Healthy People, Innovation for Sustainability and Sustainable Mobility and Infrastructure*. The fund’s biggest contributions to the Sustainable Development Goals (SDG) in 2021 were in SDG 3 (Good Health & Wellbeing), SDG 10 (Reduced Inequalities) and SDG 11 (Sustainable Cities & Communities).

At the same time, the fund’s ecological footprint (portfolio CO₂ emitted, water consumed, waste produced) has been in line with previous years, mostly lower than the footprint of the broader market.

In 2022, we will maintain a high active share and continue to search for companies that, through sustainable solutions to society’s challenges, have a strong fit with our transition themes. We also aim for further improvement of our ecological footprint, especially looking into potential improvements in waste generation.

Arjan Palthe
Fund Manager Triodos Global Equities Impact Fund
Contributing to the transition to a sustainable future

Triodos Global Equities Impact Fund has sustainable investments as its objective as described in article 9 of the SFDR. The objective of the fund is to maximise positive impact by investing exclusively in companies that contribute to one or more of our seven sustainable transition themes, which are anchored in the United Nations’ Sustainable Development Goals (SDGs).

Managing impact through four pillars

Positive impact
The fund invests in seven transition themes (see blue box) that are key to helping society overcome systematic sustainability challenges. Each company we select in the portfolio must positively contribute to at least one of these themes through its commercial strategy.

Do no significant harm
Through the strict Triodos Minimum Standards, companies are reviewed for the possible risk that their business practices could jeopardise the transition we envision. Companies that do not meet the Minimum Standards are ineligible for investment.

Manage sustainability risk
We carefully monitor sustainability risks of our investments on people and planet (inside-out), while developing a quantitative and objective methodology for assessing sustainability risks of our investees (outside-in).

Investor contribution
We integrate stewardship in every aspect of the investment management process to promote sustainable value creation for all our stakeholders, through engagement, voting and advocacy.

Our vision and impact framework are fully aligned with the UN Sustainable Development Goals. The SDGs reflect a global commitment to overcome society’s most pressing challenges in a joint public and private sector effort.

The fund’s alignment with the SDGs makes the impact outcomes recognisable, ensuring a common language and enabling comparison with other strategies. In 2021, the fund’s investees contributed most positively to the following three SDGs:

- **Sustainable Food and Agriculture**
- **Renewable Resources**
- **Circular Economy**
Stewardship

Engagement

We engage with companies and institutions to drive positive change. Where appropriate, we discuss governance, environmental and social issues relevant to their specific business models. These discussions often already take place before a company is added to the investable universe.

Direct company engagement

We have one-on-one conversations with companies to discuss sustainability topics that are important to us as an impact investor. We explore companies’ perspectives, policies and business practices around our transition themes and Minimum Standards to understand the depth of their commitments to long-term positive impact.

Collaborative and industry engagement

Sustainability challenges cannot be solved alone. We therefore also participate in joint engagement initiatives alongside other institutional investors, striving to shape an environment in which companies and investors can operate more sustainably. Collaborative engagement increases the visibility of the topics being discussed and expands the overall power of our engagement activities.

For more information on our engagement efforts, as well as concrete examples and our full voting records, please visit our Stewardship page.

Alignment with the Science Based Targets initiative

We commit all holding companies to the Science Based Targets initiative (SBTi) and aligning with the main goal of the Paris Climate Agreement: keep global warming limited to 1.5°C.

Labour rights

Engaging with companies on:

- basic labour rights
- responsibility to respect all salient human rights
- upholding commonly accepted labour standards (own operations and supply chain)

Remuneration

- focusing on companies with high pay gaps
- complex remuneration systems that are not focused on long-term sustainable goals

Voting

We vote in-person or by proxy for all investments in which we hold voting shares. We inform all investees of our decisions to stimulate awareness.

The fund voted at 43 Annual General Meetings on a total of 633 agenda items. A full breakdown of the fund’s voting records is available for download.
A values-driven investment process

How we manage impact

1. Investment idea generation & first impression scan
   - Screen for investment companies potentially contributing to fund’s impact objectives

2. Due diligence
   - Assessment on positive impact – steer on SDGs
   - Exclusion: compliance with Triodos Minimum Standards and good governance practices
   - Assessment of material sustainability risks, financial analysis (e.g. stock valuation and outlook, default risk for bonds)

3. Decision to include in Universe (Investment case)
   - Potential additional information required
   - Decision on inclusion in Universe

4. Investment decision and portfolio construction
   - Decision to add investment to the portfolio
   - Company engagement and technical assistance

5. Monitoring and reviewing
   - Portfolio construction (potential divestment, increase in stake or reduction in stake)
   - Review of investees
   - Engagement with investees
   - Internal learning & adapting

6. Communication and reporting
   - Impact reporting and thought leadership publications and events
   - Industry advancement by proactively contributing to relevant sustainability and impact initiatives and knowledge sharing with financial market participants

Positive impact, Do no significant harm, Manage sustainability risk, Investor contribution

Over the course of 2021 and 2022, we implement changes to the investment process based on our impact ambitions and sustainability regulations (e.g. EU SFDR, EU Taxonomy, MiFID II).

Check Point Software

In Q2 2021, the fund invested in Check Point Software, which provides security software and appliances for corporate networks and service providers. The company contributes to our Innovation for Sustainability theme by actively combatting cybercrime.  
› Find out more here.

KDDI

KDDI is the second largest telecom operator in Japan, contributing to our Social Inclusion and Empowerment theme. The company has made significant investments in disaster recovery and emergency measures and also has special products and services for elderly users and education programmes for young people and children.  
› Find out more here.

Danone

Danone produces and sells dairy products, water and specialised nutrition. Through its products and practices the company actively contributes to improving our food system, positively contributing to our theme Sustainable Food and Agriculture.  
› Find out more here.

Acciona Energías Renovables

The fund invested in Spanish renewable energy utility company Acciona Energías Renovables in Q3 2021. The company owns and develops renewable energy projects, including onshore wind, solar PV, hydraulic, thermal, biomass and storage assets, contributing to our Renewable Resources theme.

Triodos Global Equities Impact Fund measures impact first and foremost as positive contribution to our sustainable transition themes. Each company in the portfolio must positively contribute to at least one of these themes through its commercial strategy. In 2021 and 2020, the fund’s portfolio contributed positively to the following themes:

**Portfolio contribution to transition themes**

<table>

To further measure the impact of the fund, we assess its contribution to the UN SDGs, based on the underlying revenue streams from the product and services of each company.

Source: ISS ESG as per end of December 2020 and 2021.

In 2021, the split of SDG contributions of the fund changed most positively for SDG 4 (Quality Education). This can be partially explained by the increased portfolio weighting of Relx and the addition of Pearson, both companies that positively contribute to our theme Social Inclusion and Empowerment. The biggest decreases in contributions have been for SDGs 7 (Affordable and Clean Energy) and 13 (Climate Action). A partial explanation for these drops is the decrease in portfolio weighting of Vestas, one of the largest producers of wind turbines worldwide, which contributes to our transition theme Renewable Resources.
Ecological footprint

The carbon, water and waste footprints of the fund illustrate the lower environmental impacts of the portfolio companies' activities compared to those of the benchmark. These figures provide an indication of the fund’s sustainability performance as an outcome of the fund’s strict impact selection and exclusion criteria.

We select companies based on overall positive impact as defined by contribution to our seven transition themes. For Triodos Global Equities Impact Fund, we invest in a number of paper (packaging) companies promoting the transition from plastic to paper packaging, as well as selected food and chemical companies. Since landfill waste is defined as all waste eligible to be disposed of via landfills, it includes paper and plastic packaging and certain chemical products as well, which in many instances can be recycled so they do not end up in landfill. We consciously accept that a handful of investments with positive overall impact results in the fund have a larger waste footprint than the reference index, as we firmly believe these companies deliver a positive impact on problems like plastics pollution in our oceans.

The higher waste figure for 2021, compared to 2020, is in part due to the increased portfolio weight of holding companies Kuraray (theme Renewable Resources), Evonik (theme Sustainable Mobility and Infrastructure) and Essity (theme Prosperous and Healthy People). While these companies have higher waste due to their production process, they positively contribute to at least one of our transition themes. Furthermore, we have engaged with Evonik about waste management and ways to reduce it, as well as about phasing out certain chemicals in the production process.

End of December 2021  End of December 2020

21% less  24% less  
Equal to emissions of driving 4,000 times around the globe  
Greenhouse gas emissions

58% less  65% less  
Equal to the water use of 53 million daily showers  
Water used

98% more  67% more  
Equal to 417,000 household garbage bags of waste  
Landfill waste produced

Note: compared to a similar-sized investment in the benchmark.
Impact measurement

Contribution to the UN Sustainable Development Goals is based on the ISS ESG Sustainable Solutions Assessment, which is a comprehensive assessment of company products and services that affect the SDGs. This data enables investors to identify the share of products and services that have a positive or negative impact on 15 different social and environmental objectives. Those objectives, defined by ISS ESG, take into account the SDGs that are relevant to the private sector and to a company’s product portfolio. Revenues linked to social and environmental objectives are summed across the different objectives and mapped to each individual SDG as a direct contribution.

The carbon, water and waste footprints are calculated using carbon emissions data from ISS ESG, and water and waste data from S&P Trucost. Whereas the model calculations for the ecological footprint figures only take into account current (negative) impact (direct and indirect water, waste and emissions generated, i.e. Scopes 1-3 as defined by the GHG Protocol), the positive impact of many of our portfolio companies is transitional (such as water, waste and emissions avoided), for which data is still scarce and thus not used in the calculations. For instance, as we invest in companies promoting the transition from plastic to paper packaging, the model calculations only measure Scopes 1-3 (waste-generating manufacturing operations), leaving out the indirect positive impact (such as plastic waste avoided).

The Science Based Targets initiative (SBTi) data has been retrieved from the SBTi’s public database of committed and aligned companies. Targets adopted by companies to reduce greenhouse gas emissions are considered science based if they are in line with what the latest climate science says is necessary to meet the goals of the Paris Climate Agreement — to limit global warming to well below 2°C above pre-industrial levels and pursue efforts to limit warming to 1.5°C.
