Increasing our focus on impact bonds

Foreword by Fund Manager Rob van Boeijen

The year 2021 was marked by the recovery from 2020's COVID-19 induced global recession. Whereas global equity markets continued their sharp upward trend during most of 2021, moving further into record territory, global bond markets generated negative returns in 2021. Bond yields rose on the back of rising inflation expectations and a global shift towards monetary tightening.

This impact report shows Triodos Impact Mixed Fund - Defensive's ongoing focus on increasing its positive impact. The fund does so by selecting equity and bond issuers that have a clear fit with one of our seven transition themes. In line with this strategy, we invested in several new impact bonds that offer the opportunity to invest additional funds in specific assets or projects. Within the themes *Renewable Resources* and *Sustainable Mobility and Infrastructure*, for example, we invested in green bonds issued by Hamburger Hochbahn, Nidec, and Redes Energéticas Nacionais. We also invested in a social bond issued by the Republic of Slovenia, the proceeds of which will primarily be used to finance emergency health care for vulnerable and socially disadvantaged people.

In equities, we added exposure to the *Renewable Resources* theme via an investment in the Spanish renewable energy utility Acciona Energías Renovables, as well as to *Social Inclusion and Empowerment* through a new position in the British education company Pearson.

Triodos Impact Mixed Fund - Defensive will continue to maximise its impact by investing in companies and institutions that accelerate the transition to a better world. As the markets for impactful investments are getting more mature we can do so and simultaneously manage risk and liquidity of the fund at high standards.

Rob van Boeijen

Contributing to the transition to a sustainable future

Triodos Impact Mixed Fund - Defensive has sustainable investments as its objective as described in article 9 of the SFDR. The objective of the fund is to maximise positive impact by investing exclusively in companies and bond issuers that contribute to one or more of our seven sustainable transition themes, which are anchored in the United Nations' Sustainable Development Goals (SDGs).

Managing impact through four pillars

Positive impact

The fund invests in seven transition themes (see blue box) that are key to helping society overcome systematic sustainability challenges. Each company and bond issuer we select in the portfolio must positively contribute to at least one of these themes through its commercial strategy.

Do no significant harm

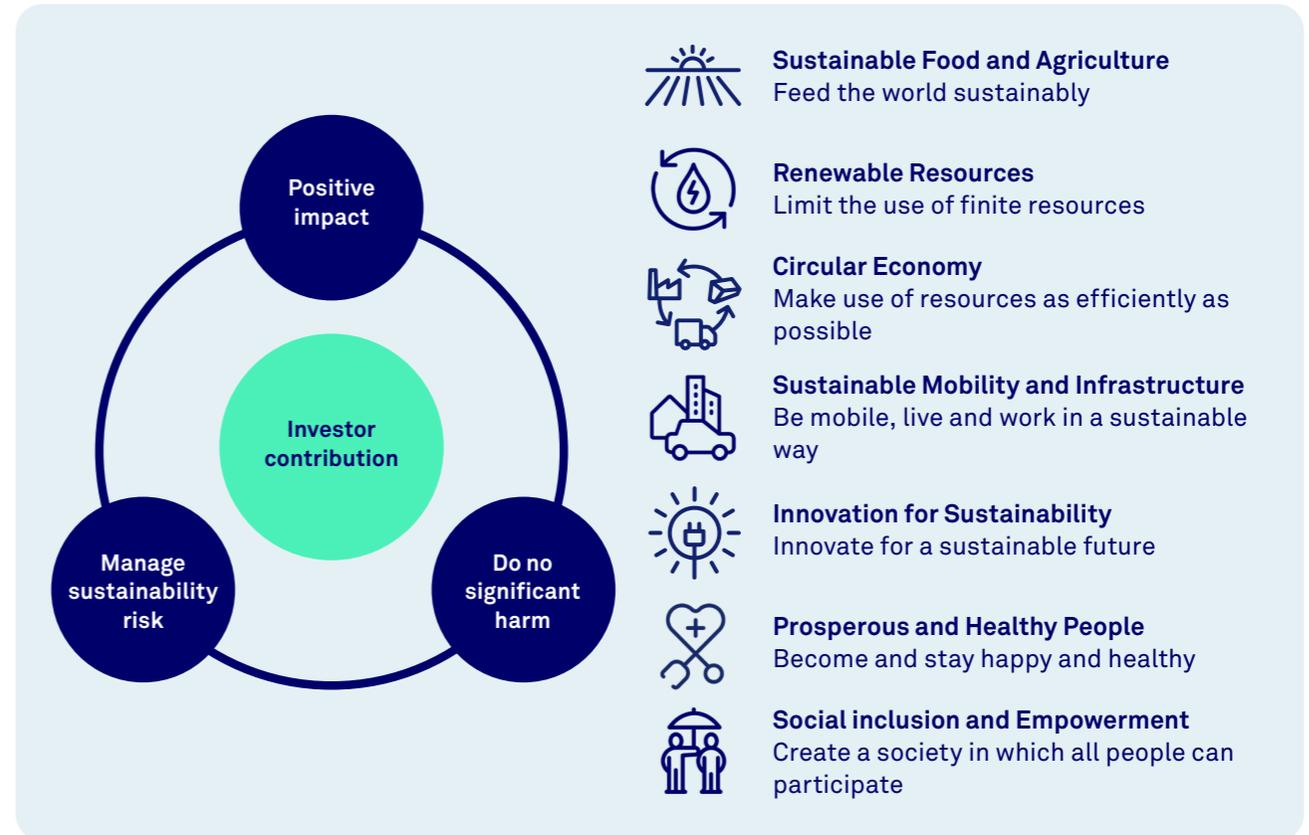

Through the strict Triodos Minimum Standards, companies and bond issuers are reviewed for the possible risk that their business practices could jeopardise the transition we envision. Companies and issuers that do not meet the Minimum Standards are ineligible for investment.

Manage sustainability risk

We carefully monitor sustainability risks of our investments on people and planet (inside-out), while developing a quantitative and objective methodology for assessing sustainability risks of our investees (outside-in).

Investor contribution

We integrate stewardship in every aspect of the investment management process to promote sustainable value creation for all our stakeholders, through engagement, voting and advocacy.

Our vision and impact framework are fully aligned with the UN Sustainable Development Goals. The SDGs reflect a global commitment to overcome society's most pressing challenges in a joint public and private sector effort.

The fund's alignment with the SDGs makes the impact outcomes recognisable, ensuring a common language and enabling comparison with other strategies. In 2021, the fund's investees contributed most positively to the following three SDGs:

Stewardship

Engagement

We engage with companies and institutions to drive positive change. Where appropriate, we discuss governance, environmental and social issues relevant to their specific business models. These discussions often already take place before a company or bond is added to the investable universe.

Direct company engagement

We have one-on-one conversations with companies and issuers to discuss sustainability topics that are important to us as an impact investor. We explore their perspectives, policies and business practices around our transition themes and Minimum Standards to understand the depth of their commitments to long-term positive impact.

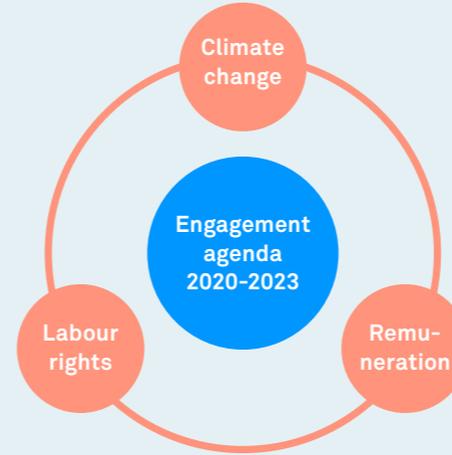

Collaborative and industry engagement

Sustainability challenges cannot be solved alone. We therefore also participate in joint engagement initiatives alongside other institutional investors, striving to shape an environment in which companies and investors can operate more sustainably. Collaborative engagement increases the visibility of the topics being discussed and expands the overall power of our engagement activities.

49

Companies and issuers engaged with

For more information on our engagement efforts, as well as concrete examples and our full voting records, please visit our [Stewardship page](#).

Climate change (see [article](#))

- goal: all holding companies commit to the Science Based Targets initiative (SBTi)
- aligning with main goal of the Paris Climate Agreement: keep global warming limited to 1.5°C

Labour rights

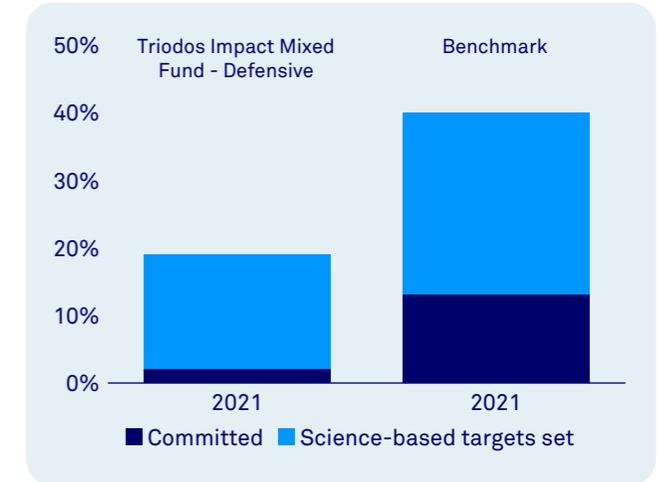

Engaging with companies on:

- basic labour rights
- responsibility to respect all salient human rights
- upholding commonly accepted labour standards (own operations and supply chain)

Remuneration

- focusing on companies with high pay gaps
- complex remuneration systems that are not focused on long-term sustainable goals

Alignment with the Science Based Targets initiative

Voting

A values-driven investment process

How we manage impact

⊕ Positive impact ⊖ Do no significant harm ⚠️ Manage sustainability risk ↗️ Investor contribution

Over the course of 2021 and 2022, we implement changes to the investment process based on our impact ambitions and sustainability regulations (e.g. EU SFDR, EU Taxonomy, MiFID II).

Impact investments

Click [here](#) for an overview of all investments of the fund.

Smurfit Kappa

In Q3 2021, the fund invested in a corporate bond from paper packaging manufacturer Smurfit Kappa. With recycling at the heart of its business model, the company positively contributes to our *Circular Economy* theme.
> Find out more [here](#).

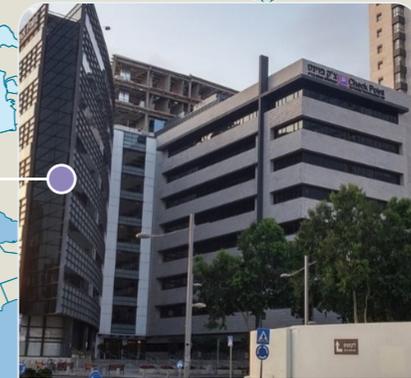

Hamburger Hochbahn

In Q1 2021, the fund participated in the newly issued green bond from Hamburger Hochbahn, the city's U-Bahn and bus operator. The company plays an important role in Hamburg's ambitious climate neutrality plan and through its activities, it positively contributes to our *Sustainable Mobility and Infrastructure* theme.
> Find out more [here](#).

Pearson

In Q1 2021, the fund added Pearson to the portfolio. The company provides educational materials and services to institutions and individual learners in various countries, positively contributing to our *Social Inclusion and Empowerment* theme.
> Find out more [here](#)

Check Point Software

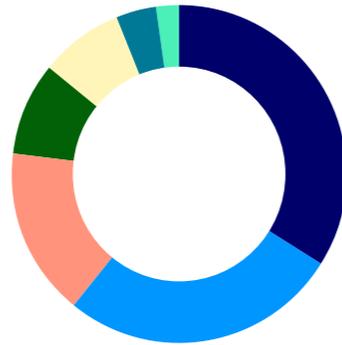

In Q2 2021, the fund invested in Check Point Software, which provides security software and appliances for corporate networks and service providers. The company contributes to our *Innovation for Sustainability* theme by actively combatting cybercrime.

Impact data

Triodos Impact Mixed Fund - Defensive measures impact first and foremost as positive contribution to our sustainable transition themes. Each company or bond issuer in the portfolio must positively contribute to at least one of these themes through its commercial strategy. In 2021, the fund's portfolio contributed positively to the following themes:

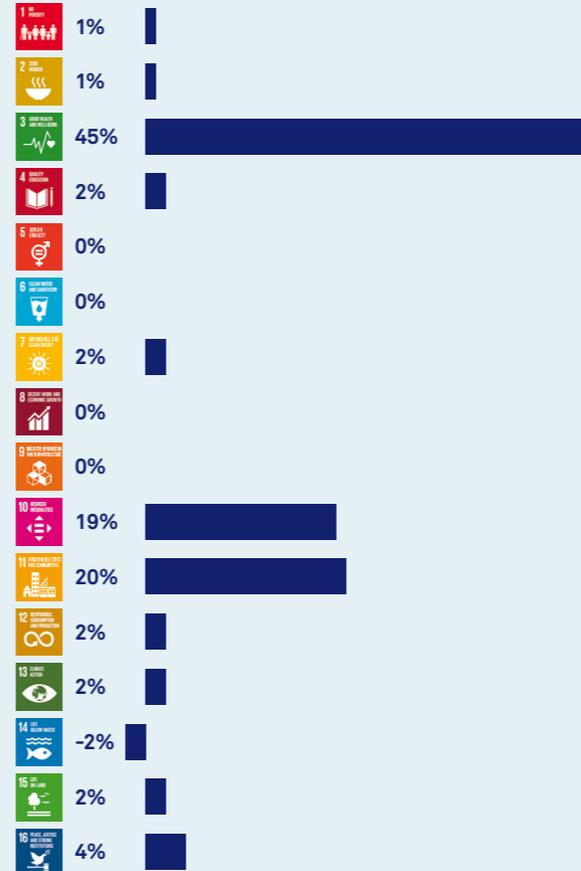

Portfolio contribution to transition themes

	% of portfolio
Sustainable Mobility and Infrastructure	34%
Social Inclusion and Empowerment	27%
Prosperous and Healthy People	16%
Renewable Resources	9%
Innovation for Sustainability	8%
Sustainable Food and Agriculture	4%
Circular Economy	2%

Sustainable Development Goals

To further measure the impact of the fund, we assess its contribution to the UN SDGs, based on the underlying revenue streams from the product and services of each company.

Source: ISS ESG as per end of December 2021.

Ecological footprint

The carbon, water and waste footprints of the fund illustrate the lower environmental impacts of the portfolio companies' activities compared to those of the benchmark. These figures provide an indication of the fund's sustainability performance as an outcome of the fund's strict impact selection and exclusion criteria.

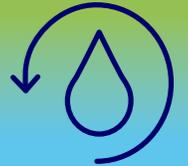

31% less

Greenhouse gas emissions
Equal to emissions of driving
115 times around the globe

80% less

Water used
Equal to the water use of
3.2 million daily showers

4% more*

Landfill waste produced
Equal to 551 household
garbage bags of waste

Note: compared to a similar-sized investment in the benchmark.

* We select companies based on overall positive impact as defined by contribution to our seven transition themes. For Triodos Impact Mixed Fund - Defensive, we invest in a number of paper (packaging) companies promoting the transition from plastic to paper packaging, as well as selected food and chemical companies. Since landfill waste is defined as all waste eligible to be deposited of via landfills, it includes paper and plastic packaging and certain chemical products as well, which in fact can in many instances be recycled and do not end up in landfill. We consciously accept that a handful of investments with positive overall impact results in the fund having a larger waste footprint than the reference index, as we firmly believe these companies deliver a positive impact on problems like plastics pollution in our oceans.

Impact measurement

Contribution to the **UN Sustainable Development Goals** is based on the ISS ESG Sustainable Solutions Assessment, which is a comprehensive assessment of company products and services that affect the SDGs. This data enables investors to identify the share of products and services that have a positive or negative impact on 15 different social and environmental objectives. Those objectives, defined by ISS ESG, take into account the SDGs that are relevant to the private sector and to a company's product portfolio. Revenues linked to social and environmental objectives are summed across the different objectives and mapped to each individual SDG as a direct contribution.

The **carbon, water and waste footprints** are calculated using carbon emissions data from ISS ESG, and water and waste data from S&P Trucost. Whereas the model calculations for the ecological footprint figures only take into account current (negative) impact (direct and indirect water, waste and emissions generated, i.e. Scopes 1-3 as defined by the GHG Protocol), the positive impact of many of our portfolio companies is transitional (such as water, waste and emissions avoided), for which data is still scarce and thus not used in the calculations. For instance, as we invest in companies promoting the transition from plastic to paper packaging, the model calculations only measure Scopes 1-3 (waste-generating manufacturing operations), leaving out the indirect positive impact (such as plastic waste avoided).

The **Science Based Targets initiative** (SBTi) data has been retrieved from the SBTi's public database of committed and aligned companies. Targets adopted by companies to reduce greenhouse gas emissions are considered science based if they are in line with what the latest climate science says is necessary to meet the goals of the Paris Climate Agreement – to limit global warming to well below 2°C above pre-industrial levels and pursue efforts to limit warming to 1.5°C.
